

**Welcome
to the family...**

RS08 support

Byte Craft Limited is pleased to
announce the only C compiler for
Freescale's RS08 architecture.

in the C6808 Code Development System

Byte Craft Limited has 30 years of experience in designing embedded systems and development tools. Our main products are C cross-compilers for a variety of microcontroller families.

We're experts in code generation for architectures with restricted resources or specialized instruction sets. We created the original C compiler for Freescale's eTPU. We work closely with Freescale on both hardware and software design.

C6808 features an **optimizing C compiler** and language tools, the BCLIDE integrated development environment, and full documentation and technical support.

C6808 supports **all members** of Freescale's HC08, HCS08, and RS08 families.

Reference designs illustrate the capabilities of C6808:

- A/D conversion with three discrete components.
- Resistance and capacitance sensing.
- Complex applications within minimal resources.
